

Introduce of a lecture

This lecture introduces a Korean medical book published during the Joseon Dynasty. After the creation of Hunminjeongeum, Joseon published medical books in easy-to-understand Korean and distributed them to the public. The public people used it to treat the disease while watching various types of Korean medical books such as an emergency medical book, an infectious disease medical book, a smallpox medical book, and a pregnancy and childbirth medical book. These Korean medical books have both medical and historical values in terms of translating Chinese characters into Korean at the time.

This lecture introduces the types of Korean medical books and reviews their contents of them. The process, content change, and lexical change of the historical change of the Korean medical book are reviewed. Through this, you will be able to understand the Korean language and Korean culture related to disease treatment in more depth.
